Unattended Coding Problem: Shopping Basket

Objective

Write a program which will calculate the total price of a basket of shopping, taking into account the special offers. There is no need to write a parser: use a list of stings, or some other simple type as the input for your application.

Shopping Basket

Apple, Apple, Orange, Apple, Pineapple, Banana, Orange, Banana

---

Pricing the Basket

Price List

Item	Price Per Item
Apple	12p
Orange	32p
Banana	51p
Pineapple	95p

Special Offers

- Apples are buy one get one free
- Bananas are three for two
